Update on COVID-19 (Coronavirus) within the Maternal Child Health Population

Office of Analytics

Andrea Rivers, MS

8/7/2020

Helping people. It's who we are and what we do.

Technical Notes/Disclaimer

- All data within this presentation are subject to change.
- Small counts have been suppressed.
- Similarly to other states nationally, a significant number of Nevada records are missing demographic information such as, but not limited to Race/Ethnicity, age and gender.

Nevada COVID-19 Data

- Nevada’s first COVID-19 case was diagnosed on March 5, 2020
- As of 8/6/20 there are 53,557 confirmed cases of COVID-19 statewide.
- This information is updated daily at <https://nvhealthresponse.nv.gov>.

COVID-19 data are reported as timely, accurately, and completely as we have available. Data are updated as we receive information that is more complete and will change over time as we learn more.
 *The daily positivity rate and number of tests per 1,000 per week are reported on a 5-day lag and based on the date the sample was collected (specimen collection date). The cumulative positivity rate is cumulative through the most recent specimen collection date with data available.

Results Filter for Demographics

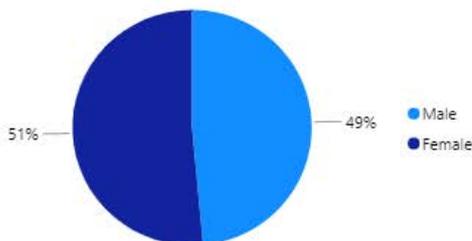

Confirmed Cases

Demographics are currently filtered to confirmed cases (53,557).

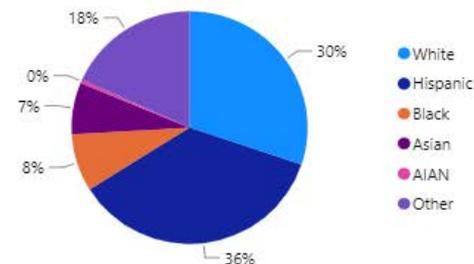

Age

Gender

Race/Ethnicity

COVID-19 can affect people of any age. Adults in Nevada have been tested and diagnosed with COVID-19 more frequently than children. However, children can also be affected by COVID-19. Children can spread COVID-19 even if they show no signs or symptoms. Adults aged 60 years old and older have died from COVID-19 more frequently than any other age group.

A significant number of laboratory records for people tested and confirmed cases are missing race and ethnicity information. Some laboratory records for people tested and confirmed cases are also missing age and gender information. This is similar to the completeness of these data fields in other states and nationally. We are actively working to improve data completeness, and as improvements are made these data may change significantly.

Women of Childbearing Age (15-44)

- As of 8/6/20 there are 14,654 confirmed COVID-19 cases of women within childbearing age.
- There have been nine (9) reported COVID-19 related deaths within this population.

Race/Ethnicity	
AI/AN non-Hispanic	33
Asian non-Hispanic	378
Black non-Hispanic	588
Hispanic/Latino	4,265
NHPI non-Hispanic	78
Other/Unknown	7,856
White non-Hispanic	1,456
Total	14,654

Age Group	
15-19	1,472
20-29	5,859
30-39	5,096
40-44	2,227
Total	14,654

Hospitalized	
No	5,582
Yes	371
Unknown	8,701
Total	14,654

Pregnant Women

- As of 8/6/20 there are 216 confirmed cases of pregnant women with COVID-19 in Nevada.
- There have been zero reported deaths related to COVID-19 within this population.

Race/Ethnicity	
AI/AN non-Hispanic	~
Asian non-Hispanic	12
Black non-Hispanic	17
Hispanic/Latino	117
NHPI non-Hispanic	~
Other/Unknown	23
White non-Hispanic	43
Total	216

Age Group	
10-19	~
20-29	102
30-39	97
40-49	9
50-59	~
Unknown	~
Total	216

Hospitalized	
No	154
Yes	48
Unknown	14
Total	216

Children 0-19

- As of 8/6/20 there are 6,173 confirmed cases of COVID-19 in children ages 0-19 in Nevada.
- There have been two (2) reported deaths related to COVID-19 in this population.

Gender	
Female	3,108
Male	2,989
Unknown	76
Total	6,173

Age Group	
<1	190
1-5	927
6-10	1,096
11-15	1,521
16-19	2,439
Total	6,173

Race/Ethnicity	
AI/AN non-Hispanic	14
Asian non-Hispanic	93
Black non-Hispanic	213
Hispanic/Latino	2,210
NHPI non-Hispanic	34
Other/Unknown	3,225
White non-Hispanic	384
Total	6,173

Hospitalized	
No	2,435
Yes	51
Unknown	3,687
Total	6,173

MIS-C

Multisystem inflammatory syndrome in children (MIS-C)

MIS-C is a serious inflammatory syndrome in children, including some teenagers. This syndrome is rare, but there appears to be an emerging link between children, MIS-C and COVID-19. This link is being researched nationally and there remains a lot to be learned about the connection.

- Prior to the COVID-19 global pandemic, MIS-C symptoms have been monitored via syndromic surveillance within Nevada hospitals, and an MIS-C diagnosis must be reported to the State.
- Between April and July 2020, there have been five (5) diagnosed MIS-C cases in Nevada. Four (4) of the diagnosed MIS-C cases also tested positive for COVID-19.
- There were no reported diagnosed cases of MIS-C in 2019.

Comorbidities/Disabilities

- Many states, including Nevada, are struggling to better identify people with disabilities and pre-existing medical conditions within confirmed cases of COVID-19.
- Below is information a disease investigator may ask around pre-existing conditions during the investigation process.
- To date, pregnancy is the most utilized field.

Pre-existing medical conditions? Yes No Unknown

Chronic Lung Disease (asthma/emphysema/COPD)	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Diabetes Mellitus	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Cardiovascular disease	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Chronic Renal disease	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Chronic Liver disease	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Immunocompromised Condition	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Neurologic/neurodevelopmental/intellectual disability	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	(If YES, specify) _____
Other chronic diseases	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	(If YES, specify) _____
If female, currently pregnant	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Current smoker	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	
Former smoker	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	<input type="checkbox"/> Unknown	

Next Steps in Data Collection

- Improved data completeness.
- Better identification of comorbidities through the disease investigation process of confirmed COVID-19 cases.
- Identification on the best way to continually monitor and display comorbidity information within confirmed COVID-19 cases.
 - This may include incorporating comorbidities in existing dashboards as other states have.
 - Georgia: <https://dph.georgia.gov/covid-19-daily-status-report>
 - Creation of separate and specific dashboards.
